CG24064B

GENERAL DESCRIPTION

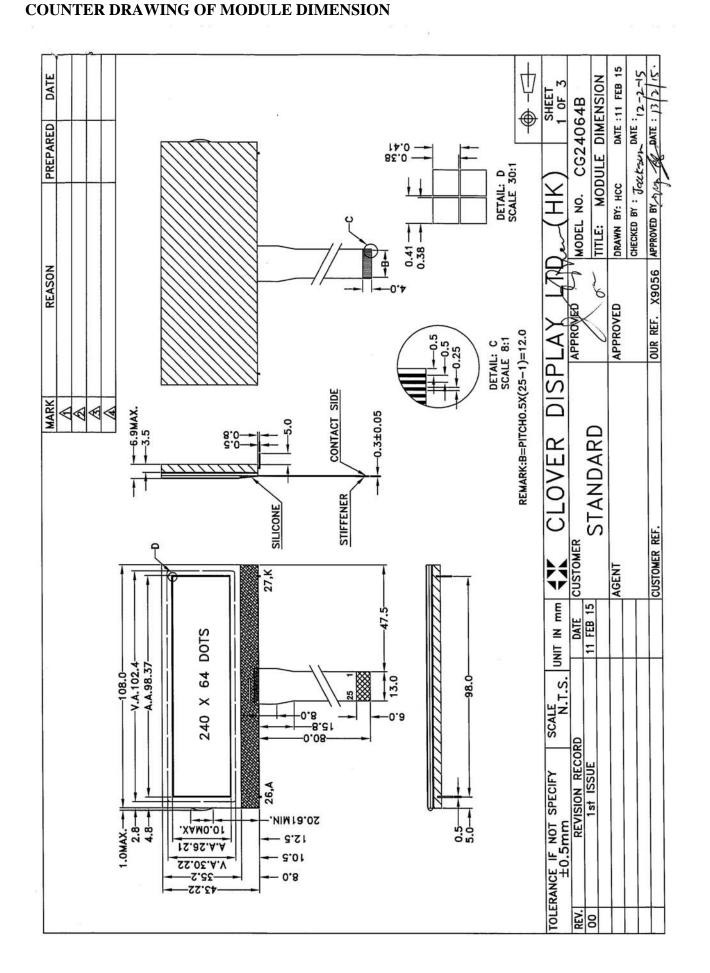

| Display mode | : | 240 x 64 dots, Graphic COG LCD module |
|----------------|---|---|
| Interface | : | 8-bit parallel or 4-line serial |
| Driving method | : | 1/64 duty, 1/10 bias |
| Controller IC | : | Sitronix ST75256 or equivalent For the detailed information, please refer to the IC specifications |

MECHANICAL DIMENSIONS

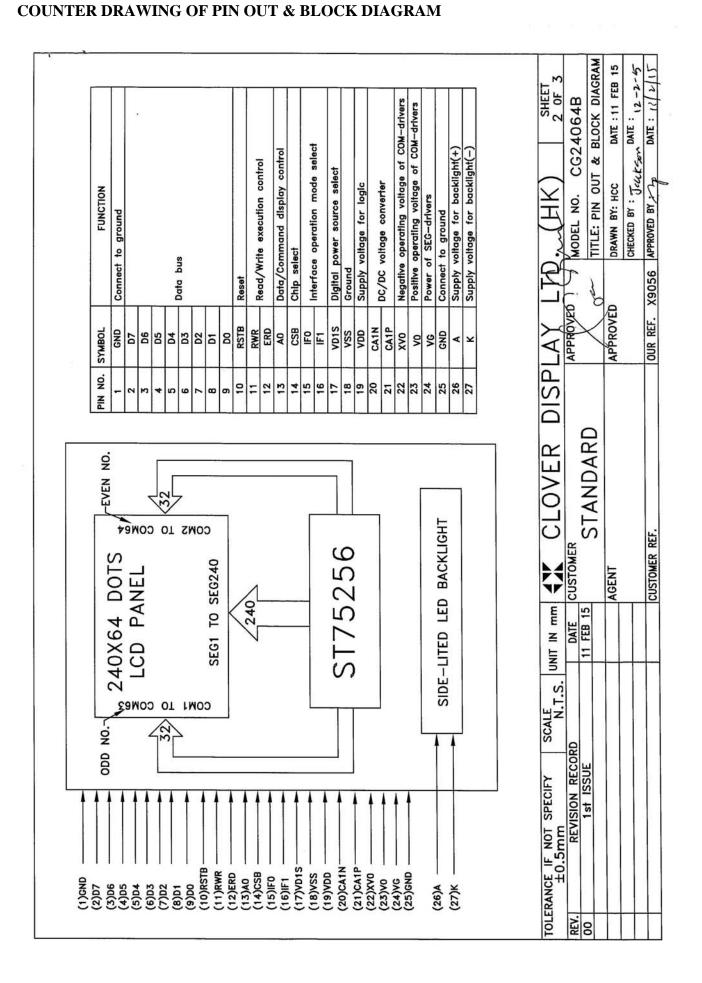

| Item | Dimension | Unit | Item | Dimension | Unit |
|-------------------|-----------------------------|------|-----------|------------------|------|
| Outline Dimension | 108.0(L)x43.22(W)x6.9max(H) | mm | Dot Size | 0.38(L)x0.38(W) | mm |
| Viewing Area | 102.4(L)x30.22(W) | mm | Dot Pitch | 0.41(L)x0.41 (W) | mm |

CONNECTOR PIN ASSIGNMENT

| CN1: | | |
|---------|--------|---|
| Pin No. | Symbol | Function |
| 1 | GND | Connect to GND |
| 2~9 | D7~D0 | Data bus |
| 10 | RSTB | Reset |
| 11 | RWR | Read/Write execution control |
| 12 | ERD | Read/ write execution control |
| 13 | A0 | Data/command display control |
| 14 | CSB | Chip select |
| 15 | IF0 | Interface energies made calent |
| 16 | IF1 | Interface operation mode select |
| 17 | VD1S | Digital power source select |
| 18 | VSS | Ground |
| 19 | VDD | Supply voltage for logic |
| 20 | CA1N | |
| 21 | CA1P | DC/DC voltage converter |
| 22 | XV0 | Negative operating voltage of COM-drivers |
| 23 | V0 | Positive operating voltage of COM-drivers |
| 24 | VG | Power of SEG-drivers |
| 25 | GND | Connect to GND |
| 26 | А | Supply voltage for backlight(+) |
| 27 | К | Supply voltage for backlight(-) |

SPEC. REV.00

CG24064B

ELECTRICAL CHARACTERISTICS

Conditions: VSS=0V, @Ta=25°C

| Item | Symbol | MIN. | TYP. | MAX. | Unit |
|-------------------------------|--------|--------|------|--------|------|
| Supply Voltage for Logic | VDD | 3.05 | 3.3 | 3.55 | v |
| Supply Current for Logic | IDD | _ | 1.0 | _ | mA |
| Operating Voltage for LCD (*) | V0 | 14.25 | 15.0 | 15.75 | V |
| 'High' Level Input Voltage | VIH | 0.7VDD | _ | VDD | V |
| 'Low' Level Input Voltage | VIL | VSS | — | 0.3VDD | V |

Note (*): There is tolerance in optimum LCD driving voltage during production and it will be within the specified range.

Side BL:

Constant voltage driving:

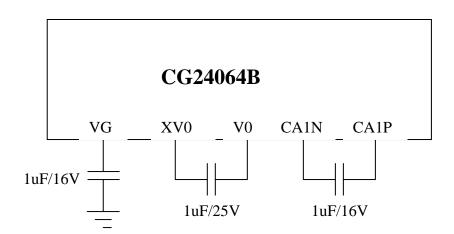

| Item | Symbol | MIN. | TYP. | MAX. | Unit | Condition | |
|-------|----------|------|------|------|------|-----------------|--|
| White | I_{BL} | | 51 | 59 | mA | $V_{BL} = 5.0V$ | |

ABSOLUTE MAXIMUM RATINGS

Please make sure not to exceed the following maximum rating values under the worst application conditions

| Item | Symbol | Rating (for normal temperature) | Rating (for wide temperature) | Unit |
|-----------------------|--------|---------------------------------|-------------------------------|------|
| Supply Voltage | Vdd | -0.3 to 4.0 | -0.3 to 4.0 | v |
| Input Voltage | Vi | -0.3 to VDD+0.3 | -0.3 to VDD+0.3 | v |
| Operating Temperature | Topr | 0 to 50 | -20 to 70 | °C |
| Storage Temperature | Tstg | -10 to 60 | -30 to 80 | °C |

Inspection condition:

No. 1 ~ 6:

The samples should be placed in room temperature for 2 hours before inspection.

Acceptance criteria:

No non-conformance found in functional and cosmetic.

HANDLING PRECAUTIONS

(1) CAUTION OF LCD HANDLING & CLEANING

Use soft cloth with solvent (recommended below) to clean the display surface and wipe lightly. - Isopropyl alcohol, ethyl alcohol, trichlorotriflorothane

Do not wipe the display surface with dry or hard materials that will damage the polarizer surface. Do not use the following solvent; -water, ketone, aromatics

(2) CAUTION AGAINST STATIC CHARGE

The LCD modules use CMOS LSI drivers, so customers are recommend that any unused input terminal would be connected to V_{DD} or V_{SS} , do not input any signals before power is turned on, and ground your body, work/assembly areas, assembly equipment to protect against static electricity.

Remove the protective film slowly and, if possible, under ESD control device like ion blower and humidity of working room should be kept over 50%RH to reduce risk of static charge.

(3) PACKAGING

Avoid intense shock and falls from a height and do not operate or store them exposed direct to sunshine or high temperature/humidity.

(4) CAUTION FOR OPERATION

It is an indispensable condition to drive LCD's within the specified voltage limit since the higher voltage than the limit causes the shorter LCD life. The use of direct current drive should be avoided because an electrochemical reaction due to direct current causes LCD's undesirable deterioration.

Response time will be extremely delayed at low temperature, and LCD's show dark color at high temperature. However those phenomena do not mean malfunction or out of order with LCD's.

Some font will be abnormally displayed when the display area is pushed hard during operation. But it resumes normal condition after turning off once.

(5) SOLDERING (for Pin type)

It is recommended to complete dip soldering at 270 $^{\circ}$ C or hand soldering at 280 $^{\circ}$ C within 3 seconds. The soldering position is at least 3mm apart from the pin head. Wave or reflow soldering are not recommended. Metal pins should not be soldered for more than 3 times and each soldering should be done after cool down of metal pins

(6) SAFETY

For crash damaged or unnecessary LCD's, it is recommended to wash off liquid crystal by either of solvents such as acetone and ethanol and should be burned up later.

When any liquid leaked out of a damaged glass cell comes in contact with your hands, wash it off with soap and water.

WARRANTY

CLOVER will replace or repair any of her LCD module in accordance with her LCD specification for a period of one year from date of shipment. The warranty liability of Clover is limited to repair and/or replacement. Clover will not be responsible for any subsequent or consequential event.
